

HSG282 regulations for Hot Tub in Holiday lets and commercial environments.

The HSG282 has been introduced by the HSE to ensure Hot Tubs used in a commercial environment meet certain standards and can offer the bather and user a safe and pleasant experience.

### **The HSG282 regulations summarised:**

1. The water capacity of the spa must be equal to or exceed 250 litres per bather seat.
2. The spa should be capable of turning over and filtering the total water capacity of the spa within 15 minutes.
3. The spa must have a built-in sanitisation system. Floating tablet dispensers are not recommended. FROG system for example.
4. The spa should be fitted with an Ozone and or UV system.
5. The spa should not be equipped with an air blower.
6. Waterfall features and any pipework which allows dead legs (can be switched off and cannot be purged) are not recommended.
7. A 24-hour or High Flow filtration system is recommended.

### **General maintenance**

Fresh / new water is required with each new set of guests.

The water should be tested and recorded twice a day and chemicals adjusted as necessary.

Records kept for 5 years.

New / Cleaned filter with each new guest.

Regular system flush for pipework.

Monthly microbiocidal testing.

Quarterly Legionella testing.
